

KantanMT launches BETA III Advanced Cloud-Based Machine Translation Platform - 13th August 2012

Xcelerator Machine Translation Solutions, is pleased to announce that its cloud-based statistical machine translation platform,

KantanMT, has reached its BETA 3 release date and now has over 40 clients using the platform.

While Beta III is not ready for prime-time usage, it does contain a significant number of key features that enable mid-sized Localisation Service Providers embrace Machine Translation and start using it in a production environment. KantanMT Beta III contains the following core features:-

- **Quickly build MT Engines:** To create a KantanMT engine, simply upload you TMX translation memories and click on Build! KantanMT will validate and cleanse these TMX files and use them as training and tuning data for your KantanMT engine
- **Speedily Translate Files:** To translate your client files, simply upload them to the site and click on Translate! Your KantanMT engine will automatically translate these files and send you the results.
- **Greater File Support:** BETA III now supports XLIFF, TTX, DITA, DOCX and XML file formats, making it easier than ever to translate your client files.
- **GENTRY File Parser Technology:** All KantanMT parsers are now implemented using Gentry, our new script based parser engine that makes developing new parsers for client files quick and easy.
- **Data Analytics:** BETA II now analyses your KantanMT engine based on BLEU and F-Measure data scoring algorithms. This helps clients track the quality and fluency of the KantanMT engines they are developing.

“This is a major milestone for the company”, said CEO and Founder, Tony O’Dowd. “We’ve developed KantanMT to be truly scalable, robust, and extremely easy to use. It’s now up to clients to tell us if we’ve succeeded and made Machine Translation accessible to small-medium sized companies and produce significant savings in time and cost.”

What is KantanMT™?

KantanMT is a cloud-based implementation of Moses statistical Machine Translation technology. Leveraging the power and flexibility of the cloud, KantanMT effortlessly scales to generate a high-quality, low-cost Machine Translation solution for small-to-medium sized Localisation Service Providers.

What is Xcelerator?

Xcelerator Machine Translations Solution is a new DCU spin out company that is focusing on making Machine Translation easy to use, inexpensive to access and available to mid-sized Localisation Service Providers that are eager to integrate Machine Translation into their clients’ localisation workflows.
