DCU and ICMR launch new spin-out ivVer to assist the manufacturing sector

The manufacturing sector in Ireland faces many challenges but ICMR and DCU spin-out **ivVer** aims to focus on utilising analytics to add value to Manufacturing organisations no matter what their business or size. Scheduling , Resource Allocation, Capacity bottlenecks, Capital investment and Quality sampling; are just some of the areas where analytics can be applied to a manufacturing organisation. The use of analytics as an integral part of key business decision making allows an organisation to gain a competitive advantage.

Based in Co. Kildare and run by a group of people with vast experience of working with some of the best known manufacturing organisations in Ireland **ivVer** provides Systems Analysis, Consultancy, Technical Training and Leadership Training . ivVer address the four building blocks to create environments conducive to good decision making.

- Good Data
- Good Analysts
- Data Savvy Managers
- Access to Analytical Experts

ivVer was developed as a result of personnel from the Irish Centre for Manufacturing Research (ICMR), the Enterprise Process Research Centre in DCU and the Enterprise Research Centre in UL working together on a development program funded by Enterprise Ireland and the IDA to develop solutions that provide incentives for companies to invest and reinvest in Ireland.
