

DCU EDTL

Enhancing Digital Teaching & Learning

What is the EDTL project?

Tailored professional development in the area of digital assessment is available to DCU programme or school teams through the EDTL project. This IUA initiative seeks to help staff develop their digital skills in order to embed technology effectively into their practice.

What can the EDTL do for me?

Participating in the EDTL project can support a programme or school team to:

- Build on existing digital skills and skills you have developed while teaching online during the Covid emergency
- Tackle assessment challenges across modules
- Enhance your assessment approaches using technology
- Develop authentic assessments for your students
- Improve students' digital learning experiences

My participation in this project was invaluable as it provided me the opportunity to develop new skills and approaches while involved in a community of practice style initiative. The team ensured that everything was tailored to my context, and were available to help at every step of the way.

Participant from 2019

How is participation in the EDTL project recognised?

- Participants have the opportunity to earn a micro-credential from the National Forum for the Enhancement of Teaching and Learning
- Participating in the programme generates evidence of professional development engagement and impact which is mapped to the DCU Academic Development & Promotions Framework and National Forum Professional Development Framework.
- Develop digital skills in specific areas of the European Framework for the Digital Competence of Educators
- Participants become part of a community within DCU focussed on digital assessment
- Collaborate with colleagues in tackling assessment issues using technology

Tailored to YOUR needs, set to YOUR own pace, personalised to YOUR context - take advantage of this unique opportunity for professional development while it's available.
