

Research Centre

Biomedical Diagnostics Institute

Post title

Postdoctoral Researcher with
Antibody/Immunoassay Expertise

Level on Framework

Level 1

Post duration

Fixed Term Contact - 1 year

Research Career Framework

As part of this role the researcher will be required to participate in the DCU Research Career Framework. This framework is designed to provide significant professional development opportunities to Researchers and offer the best opportunities in terms of a wider career path.

Overview

The Biomedical Diagnostics Institute (BDI) is a Science Foundation Ireland CSET (Centre for Science, Engineering and Technology). Established in October 2005, the BDI is an Academic-Business-Clinical partnership that carries out cutting-edge research programmes focused on the development of next-generation biomedical diagnostic devices. The BDI vision is to transform healthcare by pioneering advances in the science and technology of diagnostics and by translating these advances into clinical use.

BDI research addresses major clinical challenges informed by the partnership of clinicians, scientists and industry. Building on key scientific insights, the BDI will now apply its established capabilities to create integrated Point-of-Care solutions, which will have major impacts on diagnosing disease and sustaining human health.

Background & Role

The Applied Biochemistry Group is undertaking a number of projects associated with antibody production and use. These projects will involve all aspects of the development of specific antibodies and the generation of immunoassays to defined targets of clinical significance. We require an individual with drive and initiative who can work effectively and who has experience in immunoassay development.

Principal Duties and Responsibilities

Reporting to his/her Principal Investigator the Postdoctoral Researcher will undertake the following:

- Conduct a specified programme of research under the supervision and direction of the Principal Investigator (PI). This will involve:
 - Setting up instrumentation and development of SOPS
 - Large-scale production of antibodies using CELL CULTURE (MAMMALIAN AND BACTERIAL), salt precipitation and chromatography (HPLC, IMAC, FPLC, GEL FILTRATION and AFFINITY methods)
 - Antibody Characterisation using SDS PAGE, Western Blotting, Immunohistochemistry, ELISA and BIACORE
 - Assay, design, development and implementation.
- Mentor, assist and supervise postgraduate research students and junior research staff as required.
- Assist the PI in the management / co-ordination of key aspects of the research programme (e.g. financial management, reporting, equipment management etc.).
- Engage in the dissemination of the results of the research in which he/she is engaged to the wider research community with the support and under the supervision of the Principal Investigator.
- Engage in appropriate training and development opportunities as required by the Principal Investigator, the School or Research Centre, or the University.
- Engage with internal and external stakeholders including academic and industry partners/collaborators as appropriate.
- Carry out administrative work associated with the programme as necessary.
- Participate in BDI Centre activities, such as industry showcases and annual reviews.
- Produce top-quality journal and conference publications, in collaboration with the Principal Investigator (PI).
- Report writing and development of technical data sheets.
- Organisation of laboratory and working to defined deadlines.

Minimum Criteria

The successful candidate should have a primary degree and Ph.D. in biology. The successful candidates should have practical experience of cell culture, antibody production, protein expression, protein isolation and characterisation, ELISA, and antibody applications. Detailed experience of antibody characterisation coupled with the capacity to optimise production processes and assays would be very valuable. Expertise in the use of bioinformatics/modelling as applied to proteins would also be very beneficial

Salary: €37,750 - €41,181

Appointment will be commensurate with qualifications and experience.

Closing Date: Friday 16th October, 2015.

Candidates will be assessed on the following competencies:

Discipline knowledge and Research skills – Demonstrates knowledge of a research discipline and the ability to conduct a specific programme of research within that discipline

Understanding the Research Environment – Demonstrates an awareness of the research environment (for example funding bodies) and the ability to contribute to grant applications

Communicating Research – Demonstrates the ability to communicate their research with their peers and the wider research community (for example presenting at conferences and publishing research in relevant journals) and the potential to teach and tutor students

Managing & Leadership skills - Demonstrates the potential to manage a research project including the supervision of undergraduate students

Please do not send applications to this email address, instead apply as described below.

Application Procedure

To apply for this role, applications should include a CV and covering letter and be submitted with the application form to the Human Resources Department as outlined below.

Application forms are available from the DCU Current Vacancies (open Competitions) website at <http://www.dcu.ie/vacancies/current.shtml> and also from the Human Resources Department, Dublin City University, Dublin 9. Tel:+353 (0) 1 7005149.

Please clearly state the role that you are applying for in your application and email subject line: Job Ref 178 Post-Doctoral Researcher – Antibody/Immunoessay

Applications should be submitted by email to hr.applications@dcu.ie or by Fax: +353 (0)1 7005500 or by post to the Human Resources Department, Dublin City University, Dublin 9.
