

Informatics in eHealth

Module code: NS5058

Delivered through the Centre for Integrated Care (CeIC) this module adopts a solution focused approach to the National and EU eHealth transformational programme.

Who should apply:

Health care professionals who wish to effectively contribute to the role of health informatics in eHealth. Students will gain a greater understanding of the application of core competencies required to practice in an ICT enabled health and social care environment.

Content and structure:

This stand-alone module is also offered on the MSc Nursing / Healthcare Practice and is delivered over a 12 week time-frame. Through discussion and focused engagement participants will

develop knowledge, skills and attitudes on how health informatics and associated theory can support the delivery of eHealth across the continuum of care. Candidates will explore how the national eHealth programme is designed to address health issues. Consideration on how eHealth innovations for self-management support can impact upon outcomes in health and social care delivery will be deliberated upon.

Application deadline: August 3rd 2018

Commencing: Semester 1, 2018

Cost of module: 865 euro

Credit / Level: Level 9, 10 ECTS credits
