**Brief summary of research group / centre activity:**

We use computer vision techniques to recognise 3D objects in stereo images. In particular we are looking at human motion tracking using multiple cameras. And we are looking at retrieving 3D objects from databases.

**Description of postdoctoral project on offer:**

We wish to recognise the motion of the human body using 3D video streams from multiple cameras. We are working with an Irish company, which designs video-processing chips. We wish to build a device, which could be used as an interface for video games.
