## Developing Standardised Tests of Post-Primary

Students' Mathematical Knowledge in the Context of the Implementation of Project Maths

Seán Close, Gerry Shiel, Joanne Kiniry \& David Millar Educational Research Centre St Patrick's College, Drumcondra, Dublin 9

## Introduction

This presentation briefly describes the results of three pilot studies carried out in the Spring and Autumn of 2011 and in the Spring of 2012. The pilot studies are part of a project to develop a standardised mathematics test for use in the Second year of post-primary school which would be compatible with the incoming Project Maths curriculum for Junior Cycle.

## Project Maths

-Project Maths initiated in post-primary schools in 2008
-Being phased in over an eight-year period
-Commenced with 24 (now 23) pilot schools in September 2008

- To be fully implemented, across all classes, by June 2015
- Greater emphasis on understanding of mathematical concepts, with increased use of contexts and applications and development of problem-solving skill
- Reflects a move towards Realistic Mathematics Education
-PISA 2012 provides an opportunity to compare the performance of PM pilot schools with non-pilot schools.

## Need For Standardised Tests At Junior Cycle

The decision to develop a new standardised test of mathematics at Junior Cycle Level was motivated by several factors:

1. Outcomes of a study commissioned by the NCCA, that established a need for standardised tests of mathematics (and reading) at lower secondary level, and pointed to the potential diagnostic value of such tests for parents, teachers and students (Shiel, Kellaghan \& Moran, 2010).
2. A proposal in the DES' National Strategy to Improve Literacy and Numeracy in Schools (DES, 2011) that post-primary schools administer standardised tests in mathematics (and reading) to students at the end of $2^{\text {nd }}$ year and use outcomes for school self-evaluation and improvement.

## Item Classification for $1^{\text {st }}$ Pilot Study Test

Content Strand:Statistics \& ProbabilityNo. of Items
Geometry \& Trigonometry ..... 1527
Number \& Measure ..... 30
Algebra \& Functions ..... 23
Total
Skill Category:
Recall facts \& terms; Implement procedures ..... 28
Reason \& connect; Apply, analyse \& solve problems ..... 67
Total ..... 95
Context Category:
Practical Contexts ..... 67
Mathematical Contexts ..... 28
Total ..... 95
Item Format: (No partial credit items)
Multiple Choice ..... 19
Open Response ..... 76
Total ..... 95

## Results of $1^{\text {st }}$ Pilot Study

-1026 students in 10 schools (including 5 DEIS schools) participated in the $1^{\text {st }}$ pilot study.
-The mean weighted item percentage scores on the three test booklets were:

Booklet 1 ( 33 items) - $37 \%(N=352$ ); $28 \%$ in DEIS schools
Booklet 2 ( 32 items) - $44 \%(N=340) ; 28 \%$ in DEIS schools
Booklet 3 (31 items) - 41\% ( $\mathrm{N}=334$ ) ; 27\% in DEIS schools
Figures considered low for a potential standardised test.

## Numbers of Items with Serious Problems by Booklet: $1^{\text {st }}$ Pilot Study

|  |  | Number of Items with Problems* |  |
| :--- | :---: | :---: | :---: | :---: |

*Criteria: Difficulty Level < .25; Point Biserial Coefficient < . 30 .

## Item Classification for $\mathbf{2}^{\text {nd }}$ Pilot Study Test

| Content Strand: | No. of Items | (1 ${ }^{\text {st }}$ Pilot) |
| :--- | :---: | :---: |
| Statistics \& Probability | 41 | $(27)$ |
| Geometry \& Trigonometry | 35 | $(15)$ |
| Number \& Measure | 41 | $(30)$ |
| Algebra \& Functions | 43 | $(23)$ |
| Total | $\mathbf{1 6 0}$ | $\mathbf{( 9 5 )}$ |
| Skill Category: |  |  |
| Recall facts \& terms; Implement procedures | 93 | $(28)$ |
| Reason \& connect; Apply, analyse \& solve problems | 67 | $(67)$ |
| Total | 160 | $\mathbf{( 9 5 )}$ |
| Context Category: |  |  |
| Practical Contexts | 96 | $(67)$ |
| Mathematical Contexts | 64 | $(28)$ |
| Total | $\mathbf{1 6 0}$ | $\mathbf{( 9 5 )}$ |
| Item Format: |  |  |

| Open Response | - | $\mathbf{( 7 6 )}$ |
| Total | $\mathbf{1 6 0}$ | $\mathbf{( 9 5 )}$ |

## RESULTS of $2^{\text {nd }}$ Pilot Study

- 1242 students in 20 schools (including 5 DEIS schools) participated in the $2^{\text {nd }}$ pilot study.
-The mean weighted item percentage scores on the three test booklets were:

Booklet 4 (42 items)-52\% ( $N=307$ ) ; 51\% in DEIS schools

Booklet 5 (36 items) - 45\% ( $\mathrm{N}=312$ ) ; 38\% in DEIS schools

Booklet 6 (41 items) - 45\% ( $\mathrm{N}=315$ ) ; 38\% in DEIS schools
Booklet 7 (41 items) - 48\% ( $\mathrm{N}=318$ ) ; 43\% in DEIS schools

## Numbers of Items with Problems by Booklet: $2^{\text {nd }}$ Pilot Study

Q. 3 Michelle is filling a small swimming pool with water. When she started there was already 1500 litres of water in the pool. The table shows the number of litres $(\mathrm{L})$ in the pool after filling it for $(\mathrm{H})$ hours. Which of these equations gives the number
of litres $(\mathrm{L})$ of water in the pool after $(\mathrm{H})$ hours?

| A. | $L=700 H$ | $(\mathbf{2 3 \%})$ |
| :--- | :--- | :--- |
| B. | $L=1500 \mathrm{H}+800$ | $(\mathbf{2 0 \%})$ |
| C. | $\mathrm{L}=1500 \mathrm{H}$ | $\mathbf{( 1 8 \% )}$ |
| D. | $\mathrm{L}=1500+800 \mathrm{H}^{*}$ | $(\mathbf{3 1 \%})$ |

HL students: $\mathbf{3 1 \%}$ correct . 14 PB

Item 3

Q. 6 Which of these are solutions for the equation $x^{2}+5 x+6=0$ ?

$$
\begin{array}{ll}
\text { A. } x=-2, x=-3 & (\mathbf{2 9 \%}) \\
\text { B. } x=2, x=-3 & \mathbf{( 2 1 \% )} \\
\text { C. } x=1, x=6 & (\mathbf{2 3 \%}) \\
\text { D. } x=-1, x=-6 & \mathbf{( 1 6 \% )}
\end{array}
$$

## Item 6

Q. 9 What is the slope of the line joining the two points on the diagram above?

$$
\begin{array}{cccc}
(\mathrm{A})-4 / 3 & (\mathrm{~B})-3 / 4 & (\mathrm{C}) 3 / 4 & (\mathrm{D}) 4 / 3 \\
6 \% & 6 \% & 29 \% & 54 \%
\end{array}
$$

HL students: 54\% PB . 28

Item 9

Q. 31 In the diagram below which of the four lines is the line $\mathrm{y}=2 x+3$ ?
(A) Line a (23\%) (B) Line b (23\%) (C) Line c (35\%) (D) Line d (6\%)

HL students: 23\% correct . 29 PB

Item 31

## Conclusions

-There is difficulty in developing standardised mathematics tests when a new PM syllabus is being implemented on a phased basis. An added complication in this regard is that there is no prescribed programme for Second year students in post-primary schools though there is one for First year students (DES/NCCA, 2010).
-The difficulty in developing a single standardised mathematics test for both Ordinary Level track and Higher Level track students (with the former being mainly concentrated in DEIS schools). As a result, two separate standardised tests for use in schools are being developed - a Higher level test and an Ordinary level test, with a subset of common linking items in both tests.
-There may be a need to increase the number of items that each student is asked to attempt, in order to improve reliability. Computer-based adaptive testing, if used, could help to deal with this issue, by targeting items more precisely to student ability levels. In such a case, there would be less need to distinguish between levels since students would be assigned items based on their performance on earlier items in the test
